

Class is a blue print.

Create own class

class AbcDefG:  Pascal Case

Constructor: initialize = set some attribute of class

```
class User:
```

```
    def __init__(self):
```

```
        
        def __init__(self, id):
```

```
            self.id = id
```

```
user_1 = User("001")
```

```
print(user_1.id)
```

```
__end__
```

Create method of Object

same as define function.

Call method:

Object.method()
